

We make **Supply Chains** successful

The collaboration platform that ensures successful
collaboration with your business partners

SupplyOn is the shared supply chain collaboration platform for a growing number of globally active companies – from Airbus, Bosch and Continental to Yazaki and ZF. They and many other manufacturing firms use SupplyOn as a central online platform to manage business processes with their suppliers and service providers across continents in a structured, transparent and secure manner.

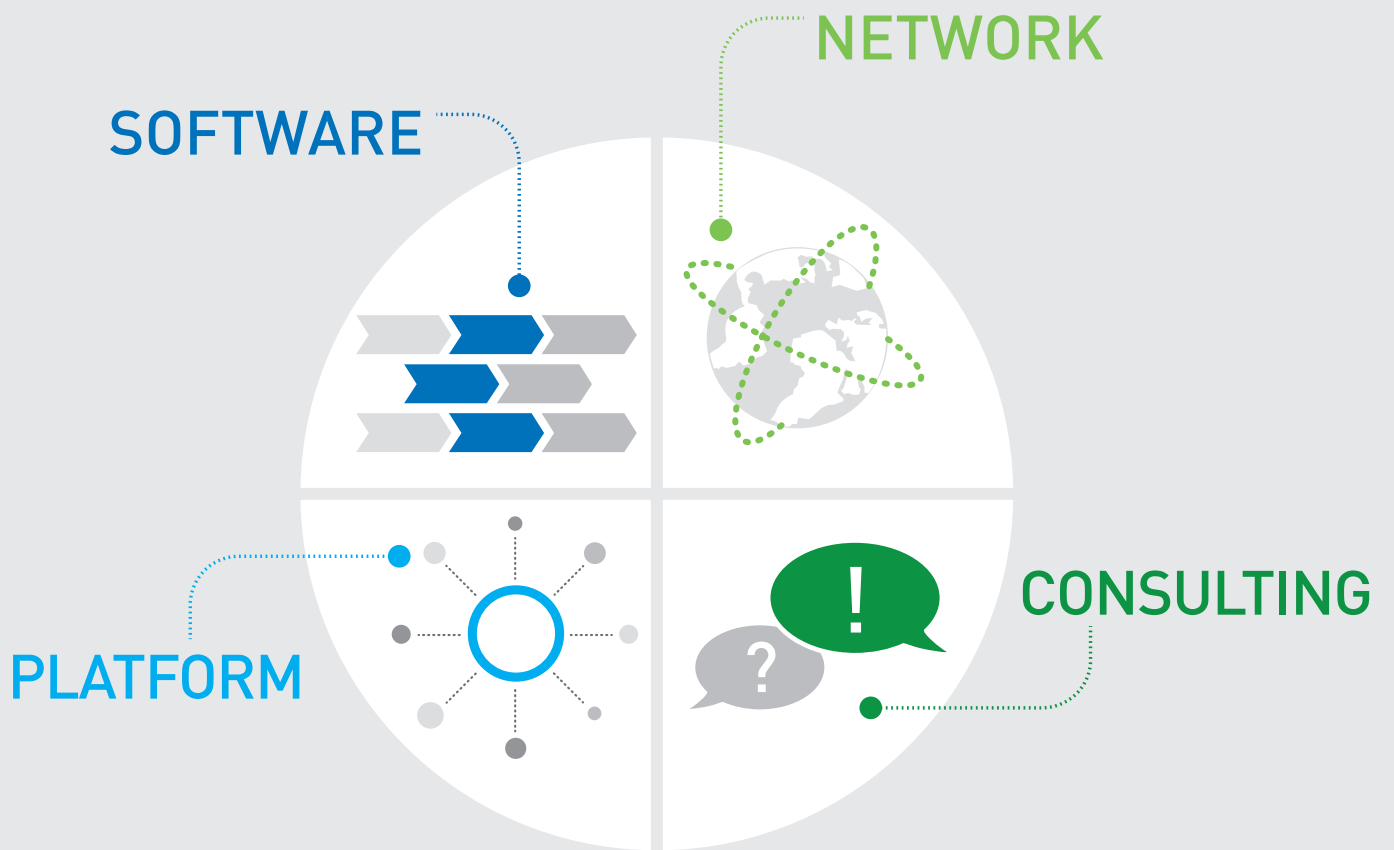

We connect **business partners**

SupplyOn has developed a global business network for the manufacturing industry which connects around 11,000 companies across 70 countries. This global network is the main added value of SupplyOn. Like with social networks, the benefit of a professional web platform lies primarily in the community that it connects.

What drives us

We are convinced that “collaboration”, the joint work on an issue that an individual person or company could not alone afford, is the key to success. Working efficiently on a common issue requires structures, processes and tools. Making these available, refining them and ensuring that they contribute to our customers’ success is our driving ambition.

 We make your Supply Chain successful

Successful collaboration with your business partners

To manage your supply chain successfully you need an efficient infrastructure that provides you with maximum transparency in terms of your business relationships. Successfully implementing that infrastructure requires considerably more than just a software that covers all the required functions. SupplyOn's approach is therefore based on four key components, which together guarantee the success of an implementation project and enable successful long-term collaboration between business partners.

Software

SupplyOn's solutions take up where internal ERP systems leave off, and extend internal business processes seamlessly beyond company borders. The solutions, which are provided as Software as a Service, encompass cross-company processes in supply chain management, supplier risk and performance management, strategic and operational procurement and in quality and transport management.

Platform

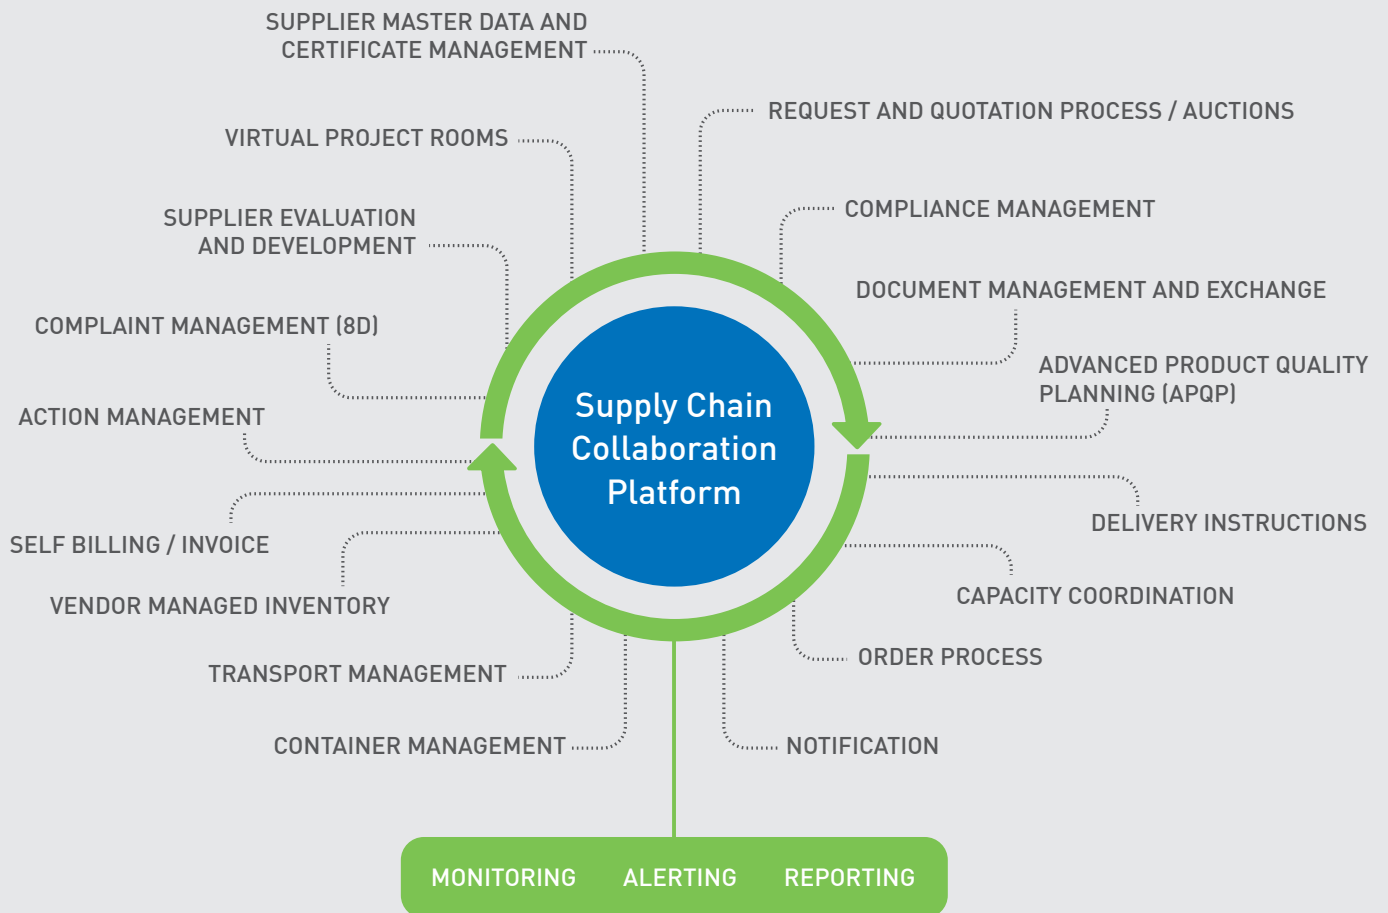

All of our customers collaborate on a shared platform, using the same solutions, but each customer can only see and edit their own data. The advantages are evident: Industry-specific processes or adaptations to new legal requirements are immediately available to all users with a single update. And every company can directly benefit from a sophisticated security and operating concept.

Network

The SupplyOn business network connects around 11,000 companies all over the world. Many of these companies are also your suppliers and can therefore be integrated into your processes in next to no time. As you are not starting from scratch with SupplyOn in terms of global partner connections, you will be able to implement the project considerably more quickly and reap the rewards earlier and with less exposure to risk.

Consulting

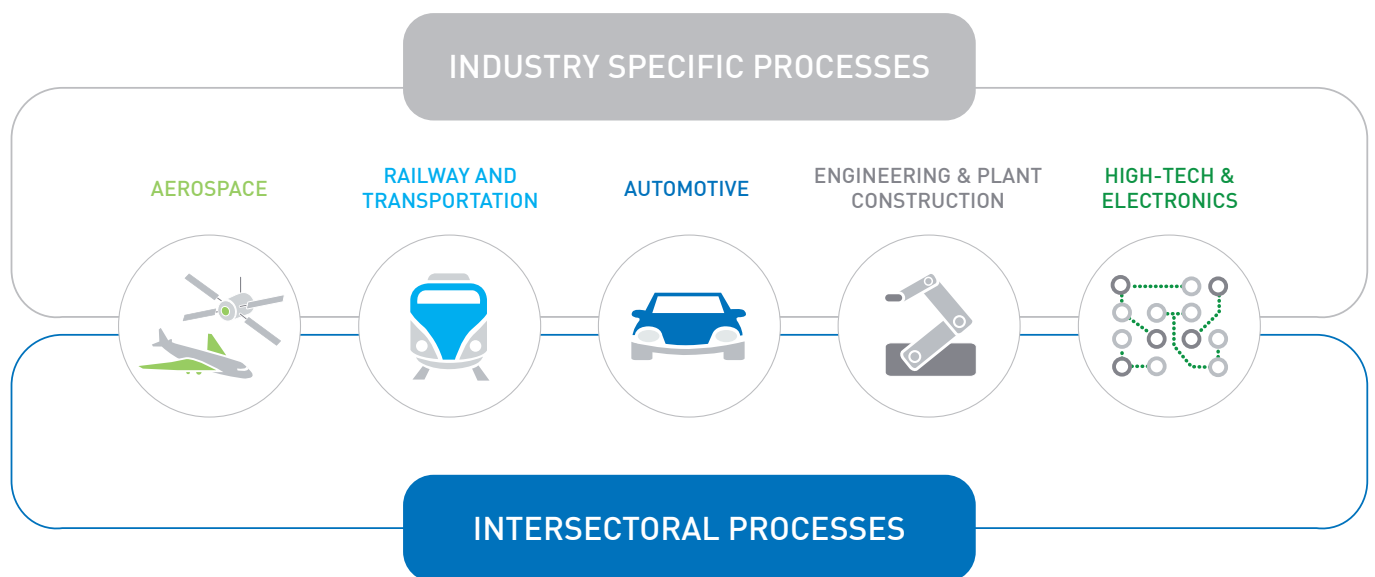

Whether it involves connecting suppliers in Asia or integrating freight forwarders for optimizing your transport network, the implementation of solutions for cross-company cooperation requires know-how, experience and intuition. And this is exactly what SupplyOn consultants bring to the table in all project phases, not only ensuring that the solutions are rolled out swiftly but that your supply chain processes are optimized across the board.

Suitable **processes** for each **industry**

Every industry has specific requirements for processes and IT solutions aimed at optimizing their supply chain. Yet companies in the manufacturing industry face similar challenges in terms of organizing collaboration with suppliers and service providers.

This is why SupplyOn has developed a collaboration platform which establishes processes which are the same for all industries, for example the ordering and invoicing process. These are then complemented with industry-specific features and processes.

This allows SupplyOn to cover a process portfolio which enables companies from different industries to successfully implement their global supplier strategy.

 Industry specific solutions ensure success

We make **Supply Chains** successful

Sites throughout the world

With our offices in Hallbergmoos near Munich (Germany), Detroit (USA) and Shanghai (China), we provide thorough coverage of all of the world's key markets. We are therefore able to offer you the best possible on-site support when it comes to implementing your global projects.
